

Lead Management System

1. User can create organizations/companies

- a. Each company has isolated data
- b. Manual registration initially (Then we will think after subscription module)

2. User Management

- a. Multi-user system
- b. Roles & permissions
- c. Hierarchical users

Permissions:

- Add
- Edit
- Delete
- Module-wise access

Hierarchy:

- Admin
- Manager
- Team lead
- Caller/Counselor
- Supervisor

3. Lead Management System

Features:

- Lead collection
- Lead assignment
- Lead tracking

- Lead nurturing
- Lead conversion
- Lead logs/history

4. Form Builder (Highest Priority)

- Dynamic form builder
- Drag/drop-like behavior
- Custom fields
- Predefined fields
- Validation
- Reporting support

Predefined Fields

Examples:

- Name
- Email
- Phone
- DOB
- Gender
- City
- State
- Country code
- Lead source

Users can create:

- Course
- Preferred callback time
- Department

- Complaint type
etc.

5. Lead Collection Methods (3 Ways)

A. iFrame Embed

Embed form inside client website.

B. API Integration

Business gets:

- API key
- Secret/token

External websites/apps submit leads via API.

C. JavaScript Widget

Like:

- Google reCAPTCHA (User can choose what they want)

6. Full Lead Activity Logs / Audit Trail

Very heavily emphasized.

Need to track:

- Who edited lead
- What changed
- Timestamp
- IP address
- Comments
- Status changes
- Assignments
- Callbacks

Basically complete audit history.

7. Lead Status Workflow / Pipeline

Need dynamic stages.

Examples:

- New
- Assigned
- Callback
- Interested
- Converted
- Closed

Industry-specific stages:

- Hospital workflow
- Admission workflow
- Sales workflow

Dynamic per organization.

8. Duplicate Lead Detection

Important requirement.

Using:

- Phone
- Email
- Combination matching

If same lead submits again:

- Don't create fresh lead blindly
- Maintain submission history/logs

9. Reporting & Analytics

They discussed this deeply.

Need:

- Charts
- Reports
- Filters
- Lead source analytics
- Gender analytics
- Age analytics
- Course analytics

Examples:

- Google vs Facebook leads
- Male/Female count
- Course-wise admissions

10. AI Reporting Layer

Planned feature.

User can:

- Ask report in natural language
- AI generates charts/reports

Example:

| “Show course-wise admissions from Kolkata”

11. Admin Panel UI

They want:

- Compact UI
- Professional

- Black/white minimal style
- Spreadsheet-like density

Inspired by:

- Salesforce
- Strapi
- Windows desktop software style

LMS User Flow:

1. Organization Creation

First step:

- Company/organization gets created
- Organization has:
 - Admin
 - Managers
 - Teams
 - Departments
 - Users
 - Roles

Example:

- Hospital
- School
- University
- Restaurant
- Service company

1. Form Creation

Admin creates forms using Form Builder.

Example forms:

- Admission inquiry
- Doctor appointment
- Contact form
- Complaint form
- Feedback form
- Callback request

Form contains:

- Predefined fields
- Custom fields
- Validation rules
- Unique identifiers
- Reportable fields

1. Form Publishing

The form gets exposed in 3 ways:

A. iFrame

Embedded directly into website.

B. JavaScript Widget

Dynamic embedded widget.

C. API

External system submits leads using API key.

1. User Submits Form

Visitor/customer fills form.

Example:

- Wants hospital appointment
- Wants admission info
- Wants product demo

System captures:

- Form data
- Timestamp
- IP address
- Device/source
- Browser
- Campaign source
- Referral source

1. Lead Creation

Submission becomes a Lead.

System:

- Generates Lead ID
- Stores form data
- Stores metadata
- Detects duplicates

If same phone/email exists:

- Mark as repeated lead
- Append logs/history

1. Auto / Manual Lead Assignment

Lead goes to:

- Department
- Manager
- Counselor
- Caller
- Team

Example:

- Cardiology inquiry → Cardiology manager
- Admission inquiry → Admission counselor

Manager can:

- Reassign lead
- Escalate lead
- Change department

1. Lead Processing / Nurturing

Assigned user works on lead.

Actions:

- Call lead
- Add comments
- Schedule callback
- Update status
- Send email/SMS
- Upload notes

Example statuses:

- New
- Busy
- Callback later

- Interested
 - Not interested
 - Follow-up
 - Converted
 - Closed
-

1. Full Activity Logging

Every action becomes timeline history.

Track:

- Who changed what
- Time
- IP
- Comments
- Status updates
- Reassignments
- Calls
- Follow-ups

Admin can see:

Complete journey of lead.

1. Lead Journey Tracking

They emphasized this heavily.

Example hospital flow:

Inquiry Submitted

- Assigned to Counselor
- Callback Done
- Appointment Scheduled

- Hospital Visit
- Service Taken
- Converted

Example college flow:

Inquiry Submitted

- Counselor Assigned
- Callback
- Admission Form Sent
- Admission Submitted
- Payment Done
- Admission Confirmed

All stages should be:

- Dynamic
- Organization-configurable

1. Lead Conversion

When lead becomes customer:

Lead moves to:

- Billing
- Admission system
- HIS
- CRM
- Other systems

Using:

- Webhooks
- APIs

1. CRM Phase (After Conversion)

After becoming customer:

- Customer retention
- Offers
- Follow-up campaigns
- Reminder calls
- Festival offers
- Health package reminders

Example:

"You previously took heart consultation, here's a new health package."

1. Reporting & Analytics

System generates:

- Lead source reports
- Conversion reports
- User performance
- Department performance
- Campaign analytics
- Gender/age/course analytics

Examples:

- Facebook generated 50 leads
 - Google generated 20 leads
 - Counselor A converted 15 leads
-

1. AI Layer (Future)

Planned additions:

- AI reports

- AI email generation
 - AI telecaller
 - AI call summaries
 - AI analytics
-

Real Core Philosophy Behind Their System

They are trying to build a generic system similar to:

- Salesforce
- Zoho
- HubSpot

But:

- More customizable
- Industry-agnostic
- Dynamic-form driven
- Modular SaaS architecture
