

LMS DOC NEW

Dashboard:

1. High-Level Performance & Volume

At the top of the dashboard, you have a bird's-eye view of your metrics for the selected time period (currently set to the **Last 30 Days**).

- **KPI Summary:** We have generated a total of **4 leads** recently, though our Conversion Rate currently sits at **0.0%**, and we have **0** active campaigns running.
- **Lead Volume Over Time:** This line graph tracks when leads are entering the system. As you can see, activity was flat for most of the month, followed by a distinct spike of 4 leads occurring between the 26th and 28th.

2. Lead Origination (Source Breakdown)

The panel on the right side details exactly where your traffic is coming from.

- The 4 recent leads are distributed perfectly evenly (25% each) across four different sources: User1, User2, User3, and an **Embedded Form: Just For test**.
- All four of these leads share the **Web_Ingest** tag, meaning they were captured automatically via web forms.

3. Analytics Deep Dive

The middle section of the dashboard allows you to analyze lead distribution and efficiency in greater detail. You can toggle this section between a visual "Graph" and a tabular "Report".

- **Graph View:** This bar chart provides a quick visual of how leads are distributed. It clearly shows that the "Counselor" assignee holds the majority

of the volume compared to the "vendor" and "Unassigned" categories.

- **Report View:** Switching to the data table gives us the exact breakdown.
 - **Counselor** has 2 leads.
 - **vendor** has 1 lead.
 - **Unassigned** has 1 lead.
 - Importantly, this view highlights that the **Average Response Time** across all categories is currently **7.5 hours**, with a 0% conversion rate across the board.

4. Recent Leads

Finally, the bottom table provides a quick roster of the newest individual contacts entering the system. For example, you can see leads like "Sayan" (Assigned to: Counselor) and "debu da tis" (Unassigned) were both captured on **Jul 27** and currently hold a **"NEW"** status.

Form Management
Manage lead capture forms and monitor conversion metrics.

Form Builder:

Form Builder Guide

The **Form Builder** lets you create, customize, publish, and manage lead capture forms without writing any code. Whether you need a simple contact form or a detailed lead generation form, everything can be built through a drag-and-drop interface.

1. Form Management

The **Form Management** page displays all forms created within the platform.

Features

- **Search Forms** – Quickly find forms by name or creator.
- **Filter Forms** – Filter forms by status.
- **Export** – Download the list of forms.
- **Create New Form** – Start building a new form.

Each form displays:

Field	Description
Form Name	Name of the form
Status	Draft or Published
Responses	Total submitted leads

Field	Description
Conversion Rate	Percentage of visitors who submitted the form
Created By	User who created the form
Actions	Edit, Duplicate, Delete

2. Creating a New Form

Click **Create New Form** to begin.

You have two options:

Create from Scratch

Start with a blank form and build everything yourself.

Best for:

- Custom lead forms
 - Registration forms
 - Inquiry forms
-

Create from Template

Choose a pre-designed form template and customize it.

Best for:

- Faster setup
 - Common business use cases
 - Standardized forms
-

3. Form Builder Interface

The Form Builder is divided into three main sections.

Left Panel – Field Library

The Field Library contains all available fields that can be added to your form. Simply click a field or drag it into the form.

Standard Fields

- Full Name
- Text Field
- Email
- Phone
- Text Area
- Date Picker
- Drop Down
- Radio Button
- City
- File Upload

Security & Custom

- CAPTCHA

These fields can be added at any time while designing the form.

Center Panel – Form Canvas

This is the workspace where your form is created.

Here you can:

- Add new fields
- Rearrange fields
- Delete fields
- Configure individual fields
- View the complete form layout

Each field includes quick actions such as:

- Edit Settings
 - Delete Field
-

Right Panel – Settings

The right sidebar changes depending on what you're editing.

Field Settings

When a field is selected, you can customize it.

Available options include:

- Field Label
- Placeholder Text
- Helper Text
- Required Field
- Show/Hide Rules
- Custom ID
- CSS Classes

This allows each field to be fully customized according to your requirements.

Form Settings

Configure how the entire form behaves.

Available settings include:

Redirect After Submission

Automatically redirect users to another page after submitting the form.

Custom Submit Button

Customize the submit button text and appearance.

Lead Source

Specify which field should be used as the lead source.

If not selected, the system uses the embedded form as the default lead source.

Lead Journey

Select the CRM pipeline where submitted leads should enter.

You can also create a new pipeline directly from this section.

Assign to Counselors

Automatically distribute incoming leads among selected counselors.

This ensures leads are assigned evenly without manual intervention.

After making changes, click **Save Form Settings**.

4. Form Actions

At the top of the builder you'll find several important actions.

Back

Return to the Form Management page.

Draft Status

Indicates whether the form is currently saved as a draft.

Auto Save

The builder automatically saves your progress while you work.

Preview

Open a live preview of the form exactly as users will see it.

This helps verify layout, labels, placeholders, and required fields before publishing.

Save Changes

Save the latest edits without publishing them.

Publish Form

Make the form live and ready to collect submissions.

Once published, the form can be embedded or shared with users.

5. More Options

The overflow menu provides additional actions.

Save as Template

Convert the current form into a reusable template.

Useful for creating standardized forms across multiple campaigns.

Version History

View previous versions of the form and restore an earlier version if needed.

This helps track changes and recover previous configurations.

Delete Form

Permanently remove the form from the system.

Use this option carefully, as deleted forms cannot be recovered unless supported by version history.

6. Previewing the Form

Click **Preview** at any time to see the form from the end user's perspective.

The preview displays:

- Form title

- Description
- All configured fields
- Required field indicators
- Submit button

Previewing helps ensure everything is working as expected before publishing.

7. Publishing the Form

Once the form is complete:

1. Add the required fields.
2. Configure field settings.
3. Set form behavior.
4. Save your changes.
5. Click **Publish Form**.

After publishing, the form becomes available for collecting leads and submissions.

Typical Workflow

1. Open **Form Management**.
2. Click **Create New Form**.
3. Choose **Create from Scratch** or **Create from Template**.
4. Add fields from the **Field Library**.
5. Customize each field using **Field Settings**.
6. Configure **Form Settings** such as lead source, pipeline, and assignment.
7. Click **Preview** to verify the form.
8. Save your changes.
9. Publish the form.

10. Monitor submissions and conversion metrics from the **Form Management** page.

The screenshot displays the 'All Leads' dashboard. At the top, there are four summary cards: 'TOTAL LEADS' (4, +4% vs last month), 'NEW LEADS' (3, +100% vs last week), 'FOLLOW-UPS TODAY' (0, 0% vs yesterday), and 'PENDING LEADS' (3, 0% vs yesterday). Below these are filter tabs for 'All Leads' (4, 100%), 'Primary Leads' (2, 50%), 'Secondary Leads' (2, 50%), 'Tertiary Leads' (0, 0%), 'Verified Leads' (0, 0%), and 'Unverified Leads' (4, 100%). Further down, there are filters for 'Online Leads' (4, 100%), 'Offline Leads' (0, 0%), and 'Not Assigned' (1, 25%). A search bar and various dropdown menus (Date Range: All Time, Counselor: All, Source: All, Status: All Active, Verification: All) are present. A table shows the first two leads, both with a score of 60 and a 'NEW' status.

ACTION	NAME & EMAIL	PHONE	LEAD SCORE	STATUS	ASSIGNED TO	SOURCE	QUERY	LAST CONTACTED	NEXT FOLLOW-UP	AGE
☐	DE debu debu@gmail.com	--	60	CALLBACK	vendor	Embedded Form: Just For test	General Inquiry	None	--	1 da
☐	DD debu da debu@gmail.com	--	60	NEW	Counselor	debu da	General Inquiry	None	--	1 da

All Leads:

All Leads Guide

The **All Leads** page serves as the central hub for managing every lead captured through your CRM. It provides a complete overview of lead performance, enables quick filtering and searching, and allows users to perform lead management actions from a single interface.

Dashboard Overview

At the top of the page, summary cards provide a snapshot of your lead data.

Total Leads

Displays the total number of leads currently in the system.

This card also shows the percentage increase or decrease compared to the previous month, helping you track overall lead growth.

New Leads

Shows the number of newly added leads within the selected period.

A comparison with the previous week helps monitor recent lead generation performance.

Follow-ups Today

Displays the number of leads that require follow-up today.

This helps sales teams stay on top of scheduled customer interactions.

Pending Leads

Shows the number of leads that are still awaiting action or progression through the sales process.

Lead Categories

Below the dashboard cards are quick filters that allow you to instantly switch between different lead groups.

Available categories include:

Category	Description
All Leads	Displays every lead in the system.
Primary Leads	High-priority leads requiring immediate attention.
Secondary Leads	Medium-priority leads with potential for future conversion.
Tertiary Leads	Low-priority or long-term nurturing leads.
Verified Leads	Leads whose information has been validated.
Unverified Leads	Leads pending verification.
Online Leads	Leads collected through online sources such as forms or websites.
Offline Leads	Leads entered manually or imported from offline channels.
Not Assigned	Leads that have not yet been assigned to a counselor or sales representative.

Each category displays the total number of leads along with the percentage they represent.

Search and Filters

Powerful filtering options make it easy to locate specific leads.

Search

Search leads by:

- Name
 - Email
 - Phone Number
 - Owner
-

Date Range

Filter leads based on when they were created.

Examples:

- Today
 - Yesterday
 - Last 7 Days
 - Last 30 Days
 - Custom Range
-

Counselor

View leads assigned to a specific counselor or salesperson.

Source

Filter leads by where they originated.

Examples:

- Website Form
 - Embedded Form
 - Campaign
 - Manual Entry
 - Import
-

Status

Display leads according to their current stage.

Examples:

- New
 - Callback
 - Qualified
 - Converted
 - Closed
-

Verification

Filter between:

- Verified
 - Unverified
 - All
-

Query

Filter leads based on the type of inquiry or service requested.

Column Management

The **Columns** option allows users to customize the table by showing or hiding specific columns.

This helps each team member tailor the view to match their workflow.

Bulk Actions

The **Actions** menu provides options to perform operations on one or multiple selected leads, such as:

- Assign leads
 - Change status
 - Export selected leads
 - Delete leads
 - Other bulk management actions (depending on user permissions)
-

Lead Table

The main table displays detailed information for every lead.

Each row represents an individual lead.

Action

Provides quick actions for managing a lead, such as editing details, updating status, assigning ownership, or viewing the full lead profile.

Name & Email

Displays the lead's name along with their registered email address.

Phone

Shows the contact phone number associated with the lead.

Lead Score

A numerical score indicating the quality or potential of the lead.

Higher scores generally represent stronger conversion opportunities.

Status

Displays the lead's current stage in the sales pipeline.

Examples include:

- New
- Callback
- Qualified
- Converted
- Closed

Status labels provide a quick understanding of each lead's progress.

Assigned To

Shows the counselor, sales representative, or team member responsible for managing the lead.

Source

Identifies where the lead originated.

Examples include:

- Embedded Form
- Landing Page
- Campaign
- Manual Entry
- Import

This helps evaluate the effectiveness of different lead generation channels.

Query

Displays the type of inquiry submitted by the lead.

Examples:

- General Inquiry
 - Admission
 - Support
 - Product Information
-

Last Contacted

Shows the most recent date or time when communication occurred with the lead.
This helps avoid duplicate follow-ups and ensures timely engagement.

Next Follow-up

Displays the next scheduled follow-up date or reminder.
Sales teams can quickly identify which leads require attention.

Age

Indicates how long the lead has been in the CRM since it was created.
Older leads may require re-engagement or closure based on business processes.

Sorting

Most table columns support sorting in ascending or descending order.
You can sort by:

- Name
- Lead Score
- Status
- Assigned To
- Last Contacted
- Age

Sorting helps prioritize leads based on your workflow.

Pagination

At the bottom of the table, pagination controls allow you to:

- Select the number of rows displayed per page.
 - Navigate between pages when managing large volumes of leads.
-

Typical Workflow

1. Open the **All Leads** page.
2. Review the dashboard cards to understand current lead activity.
3. Select a lead category such as **New**, **Verified**, or **Not Assigned**.
4. Use the search bar or filters to narrow down the lead list.
5. Review lead details, including score, status, source, and assigned owner.
6. Update lead information, assign counselors, or schedule follow-ups as needed.
7. Use bulk actions to efficiently manage multiple leads.
8. Monitor lead progress and conversion over time using the dashboard metrics.

The **All Leads** page is designed to give sales and support teams a complete view of the lead lifecycle, making it easier to organize leads, prioritize follow-ups, and improve conversion rates through efficient lead management.

Analytics:

Analytics Guide

The **Analytics** module provides a centralized dashboard to monitor your CRM performance in real time. It transforms lead data into visual reports and actionable insights, helping administrators and sales teams evaluate pipeline health, lead acquisition, conversion trends, and team performance.

Each analytics section combines an interactive chart with a detailed report table, making it easy to understand data at a glance while allowing deeper analysis and report generation.

CRM Analytics Dashboard

The Analytics Dashboard is divided into multiple reporting sections, each focusing on a different aspect of your lead management process.

These reports update automatically as new leads are added or existing leads progress through the CRM.

1. Lead Stage Analysis

The **Lead Stage Analysis** section provides a visual breakdown of leads based on their current stage within the sales pipeline.

Chart

The bar chart displays the total number of leads in each pipeline stage, such as:

- New
- Callback
- Qualified
- Converted
- Closed

This allows managers to quickly identify where leads are concentrated and detect bottlenecks in the sales process.

Lead Stage Report

Alongside the chart is a detailed report table displaying:

Column	Description
Stage	Current pipeline stage
Leads Count	Number of leads in that stage
Distribution Percentage	Percentage of total leads

The search box allows users to quickly locate a specific stage.

Generate Report

Click **Generate Report** to export the stage analysis report for reporting or management purposes.

2. Lead Registration Intake

The **Lead Registration Intake** section tracks how many new leads are created over time.

This helps businesses monitor lead acquisition trends and evaluate marketing performance.

Time Filters

Users can switch between:

- Daily
- Yearly

to analyze lead registrations over different time periods.

Chart

The line chart displays the volume of newly registered leads across the selected timeline.

This makes it easy to identify:

- Growth trends
- Seasonal spikes
- Low-performing periods

Registration Report

The accompanying table includes:

Column	Description
Timeframe	Date or period
Leads Created	Number of new registrations
Conversion Rate	Percentage of successful conversions

Use the search box to filter results by a specific date or interval.

Generate Report

Export the registration analytics into a downloadable report for further analysis or presentations.

3. Demographics Tracking

The **Demographics Tracking** section analyzes lead distribution based on geographic regions.

This helps organizations understand where their leads are coming from and identify high-performing markets.

Region Filters

Users can toggle between:

- States
- International

to analyze regional performance at different levels.

Chart

A donut chart visually represents the proportion of leads from each selected region.

This provides a quick overview of geographic lead distribution.

Demographics Report

The report table displays:

Column	Description
Region	Geographic location
Leads Count	Number of leads from the region
Conversion Rate	Regional conversion percentage

Generate Report

Export regional analytics for market research, planning, or business reviews.

4. Source Channel Breakdown

The **Source Channel Breakdown** section measures the effectiveness of each lead acquisition channel.

This enables businesses to identify which marketing sources generate the highest-quality leads.

Chart

The horizontal bar chart compares different lead sources based on:

- Number of leads
- Conversion percentage
- Average lead quality

Hovering over a bar displays additional information such as:

- Total Leads
- Conversion Rate
- Average Lead Score

Source Channel Report

The detailed report includes:

Column	Description
Source Channel	Lead acquisition source
Leads Count	Total leads generated
Conversion Rate	Percentage converted
Average Lead Score	Average quality score of leads

Examples of sources include:

- Website Forms
- Embedded Forms
- Marketing Campaigns
- Referral Channels
- Social Media

- Manual Entry

Generate Report

Export channel performance reports to evaluate marketing ROI and optimize future campaigns.

5. Vendor Performance Analysis

The **Vendor Performance Analysis** section evaluates the performance of external vendors or counselors responsible for generating or managing leads.

View Options

Users can switch between:

- Vendor
- Counselor

to compare performance across different teams or partners.

Chart

The horizontal bar chart displays:

- Total leads generated
- Relative contribution
- Distribution among vendors or counselors

This helps identify top-performing contributors.

Vendor Performance Report

The report table includes:

Column	Description
Vendor Name	Name of the vendor or counselor
Leads Generated	Total leads handled
Conversion Rate	Percentage of successful conversions

Column	Description
Quality Score	Average quality rating of generated leads

The quality score provides an indication of the overall effectiveness of the leads generated.

Generate Report

Download vendor performance reports for audits, reviews, or performance evaluations.

Search and Filtering

Each report includes a dedicated search field that allows users to quickly locate specific records without manually browsing the entire dataset.

Depending on the report, users can search by:

- Stage
 - Timeframe
 - Region
 - Source Channel
 - Vendor or Counselor
-

Report Generation

Every analytics section includes a **Generate Report** button.

Reports can be exported for:

- Business presentations
- Management reviews
- Marketing analysis
- Performance tracking
- Data sharing

- Record keeping

This enables stakeholders to work with analytics outside the CRM when needed.

Interactive Visualizations

The Analytics Dashboard uses multiple chart types to simplify data interpretation:

Chart Type	Purpose
Bar Chart	Compare lead counts across pipeline stages
Line Chart	Monitor lead registrations over time
Donut Chart	Visualize geographic lead distribution
Horizontal Bar Chart	Compare source channels and vendor performance

Interactive tooltips provide additional details when hovering over chart elements, offering deeper insights without cluttering the dashboard.

Typical Workflow

1. Open the **Analytics** module.
2. Review the **Lead Stage Analysis** to understand the current pipeline distribution.
3. Check the **Lead Registration Intake** to monitor daily or yearly lead growth trends.
4. Analyze **Demographics Tracking** to identify high-performing regions and markets.
5. Review the **Source Channel Breakdown** to determine which marketing channels generate the best leads.
6. Evaluate **Vendor Performance** to measure the effectiveness of vendors or counselors.
7. Use the search filters to focus on specific data points.

8. Export reports using the **Generate Report** button for meetings, reporting, or further analysis.

The **Analytics** module provides a comprehensive, real-time view of CRM performance, enabling businesses to make data-driven decisions, optimize lead generation strategies, monitor sales pipeline health, and improve overall conversion performance.

The screenshot shows a 'Create New Team' modal window. It has a title bar with a close button (X). The form is divided into three sections: 1. 'TEAM NAME *' with a text input field containing 'e.g. BHM Counseling Dept'. 2. 'ABOUT / DESCRIPTION' with a larger text area containing 'e.g. Focuses on hotel management leads outreach and conversion rules.'. 3. 'INVITE MEMBERS & ASSIGN ROLES' which contains a list of three members, each with an unchecked checkbox: 'testC' (testc@gmail.com), 'vendor' (vendor@gmail.com), and 'Counselor' (counselor@gmail.com). At the bottom, there are two buttons: 'Cancel' and 'Save Team'.

Team:

Teams & Departments Guide

The **Teams & Departments** module helps administrators organize users into departments or functional teams. It simplifies collaboration by grouping members, assigning responsibilities, and managing lead distribution across the organization.

Whether you're creating teams for **Sales, Counseling, Admissions, or Support**, this module ensures leads and responsibilities are managed efficiently.

Teams Dashboard

The Teams page provides an overview of all teams within the organization.

From this page, you can:

- View all existing teams
- Search for a specific team
- Create new teams
- Manage team members
- Organize departments

If no teams have been created, the dashboard displays a message encouraging users to create their first team.

Search Teams

The search bar allows you to quickly find teams by:

- Team Name
- Description
- Department Name
- Team Head (if applicable)

This makes it easy to locate teams in organizations with multiple departments.

Create Team

Click the **Create Team** button to open the team creation window.

This allows administrators to build a new department and assign members in just a few steps.

Create New Team

The **Create New Team** dialog contains all the information required to set up a department.

Team Name

Enter a unique and meaningful name for the team.

Examples:

- Sales Team
- Admission Department
- Counseling Team
- Marketing Team
- Customer Support

The team name helps identify the department throughout the CRM.

About / Description

Provide a brief description explaining the team's purpose and responsibilities.

For example:

Handles student counseling, manages admission inquiries, and follows up with prospective applicants.

A clear description helps administrators understand each team's role.

Invite Members & Assign Roles

Select one or more users who will become members of the team.

Each available user is displayed with:

- Name
- Email Address

Simply check the box beside each member to include them in the team.

This enables administrators to quickly build departments without manually assigning users one by one.

Save Team

After entering the required information:

1. Provide a team name.
2. Add an optional description.
3. Select team members.
4. Click **Save Team**.

The new team will immediately appear on the Teams dashboard.

Cancel

Click **Cancel** to close the dialog without saving any changes.

Team Management

Once teams are created, administrators can:

- View team information
- Search for specific teams
- Manage department members
- Update team details
- Modify descriptions
- Add or remove members as organizational needs change

This ensures teams remain accurate as staff and responsibilities evolve.

Benefits of Using Teams

Organizing users into teams provides several advantages:

- Centralized department management
- Easier assignment of users to organizational units

- Better collaboration between team members
 - Improved lead ownership and accountability
 - Streamlined lead routing and distribution
 - Clear separation of responsibilities across departments
-

Typical Workflow

1. Open the **Teams & Departments** module.
2. Click **Create Team**.
3. Enter a descriptive **Team Name**.
4. Add a short description outlining the team's responsibilities.
5. Select the users who should belong to the team.
6. Click **Save Team**.
7. Use the search bar to quickly locate teams when needed.
8. Update team information or membership as your organization grows.

The **Teams & Departments** module provides a structured way to organize your workforce, making it easier to manage departments, assign members, and support efficient collaboration across the CRM.

Audit Log:

Audit Logs Guide

The **Audit Logs** module provides a complete chronological history of system and user activities within the CRM. It helps administrators monitor changes, track user actions, maintain accountability, and ensure transparency across the platform.

Every significant action performed by users—such as creating records, updating settings, changing permissions, or modifying forms—is automatically recorded in the audit log.

Audit Logs Dashboard

The Audit Logs page displays a searchable and filterable history of all recorded activities.

From this page, administrators can:

- View system activity history
- Monitor user actions
- Track changes made to CRM records

- Filter logs by date and action
- Export audit reports for compliance or review

This provides complete visibility into who performed an action, when it occurred, and what was changed.

Date Range Filter

At the top of the page, users can filter logs by a specific time period.

Available options include:

- Last 7 Days
- Last 30 Days
- Custom Date Range

This allows administrators to focus on activities performed during a specific period.

Search Logs

The search bar enables quick access to specific records.

You can search using:

- User Name
- Entity Name
- IP Address
- Action Details
- Change Information

This is particularly useful when investigating a specific event or user activity.

Action Filter

Use the **Filter by Action** dropdown to display only certain types of activities.

Examples include:

- User Created
- User Updated
- Profile Updated
- Form Updated
- Permission Changed
- Settings Updated
- Login Activities
- Other system events

Filtering makes it easier to analyze specific administrative operations without reviewing the entire activity history.

Active Filters

The **Active Filters** section displays any filters currently applied to the audit logs.

This helps users understand which criteria are affecting the displayed results and ensures accurate data analysis.

Audit Log Table

Each row in the table represents a single recorded activity.

Timestamp

Displays the exact date and time when the activity occurred.

This allows administrators to reconstruct the sequence of events accurately.

User

Shows the user who performed the action.

Each entry includes the user's name, making it easy to identify who initiated the activity.

Action

Describes the operation that was performed.

Examples include:

- Updated Profile Details
- Updated User Details
- New User Created
- System Settings Updated
- Updated Form

This provides a quick summary of the activity without opening additional details.

Target Entity

Displays the module or record affected by the action.

Examples include:

- User Management
- Profile Settings
- Form Management
- Permissions
- CRM Records

This helps identify where changes occurred within the system.

IP Address

Displays the IP address from which the action was performed.

Recording IP addresses helps improve security by allowing administrators to identify the origin of system activities and investigate suspicious access if

necessary.

Change Details

Provides a detailed description of what changed.

Examples include:

- Admin updated their own profile
- New user created
- User role changed
- Department assigned
- Form status changed to Published
- Permissions updated for a specific role

This gives administrators full context without needing to inspect the affected record.

Export Audit Logs

Click the **Export** button to download audit records for external use.

Exported reports can be used for:

- Compliance audits
 - Internal reviews
 - Security investigations
 - Management reporting
 - Backup documentation
-

Pagination

The bottom of the page includes pagination controls that allow users to:

- Navigate between multiple pages of logs

- View additional activity records
 - Manage large audit histories efficiently
-

Benefits of Audit Logs

The Audit Logs module helps organizations by:

- Tracking every important system activity
 - Maintaining accountability for user actions
 - Improving security through activity monitoring
 - Simplifying troubleshooting and investigations
 - Supporting compliance and governance requirements
 - Providing a transparent history of configuration and data changes
-

Typical Workflow

1. Open the **Audit Logs** module.
2. Select a date range to narrow the activity history.
3. Apply an **Action Filter** if you are looking for specific events.
4. Use the search bar to locate activities by user, entity, IP address, or change details.
5. Review the log entries to understand who performed each action and what changes were made.
6. Examine timestamps and IP addresses when investigating unusual or unauthorized activity.
7. Export the filtered logs if they are required for reporting, audits, or compliance purposes.

The **Audit Logs** module serves as the system's activity history, providing administrators with a reliable record of every important action performed within the CRM. By offering detailed tracking, filtering, and reporting capabilities, it

enhances security, accountability, and operational transparency across the platform.

Showing 1 to 3 of 3 records

Role Management Guide

The **Role Management** module allows administrators to control user access, assign responsibilities, and define permissions across the CRM. It ensures that every user only has access to the features and data required for their role, improving security, accountability, and operational efficiency.

The module consists of two main sections:

- **User Accounts**
- **Roles & Permissions**

1. User Accounts

The **User Accounts** section is used to create, manage, and monitor all users within the CRM.

Dashboard Overview

At the top of the page, summary cards provide a quick overview of user accounts.

Total Users

Displays the total number of registered users in the system.

Active Accounts

Shows the number of users who currently have active access to the CRM.

Suspended Accounts

Displays users whose accounts have been temporarily disabled.

Suspended users cannot log in until their account is reactivated.

Pending Invites

Shows the number of invitations that have been sent but not yet accepted.

This helps administrators track onboarding progress.

Search and Filters

Finding users is quick and simple using the available search and filter options.

Search Users

Search users by:

- Name
 - Email Address
-

Role Filter

Filter users based on their assigned role.

Examples include:

- Admin

- Counselor
 - Vendor
 - Custom Roles
-

Status Filter

View users based on their account status.

Examples:

- Active
 - Suspended
 - Pending
-

Add New User

Click **Add New User** to invite a new member to the organization.

When creating a user, administrators typically assign:

- User Name
- Email Address
- Role
- Department

Once invited, the user can access the CRM based on their assigned permissions.

User Table

The user list displays important account information.

User Info

Displays:

- User Name

- Email Address
-

Role

Shows the role assigned to each user.

Examples:

- Admin
 - Vendor
 - Counselor
-

Department

Displays the department the user belongs to.

Examples:

- Admissions
 - Sales
 - Marketing
 - Support
-

Last Activity

Shows the user's most recent activity or invitation status.

This helps administrators monitor account usage.

Status

Indicates whether the account is:

- Active
 - Suspended
 - Pending
-

Actions

Administrators can perform quick actions such as:

- Edit user information
- Suspend or reactivate accounts
- Delete users

These actions simplify day-to-day user management.

2. Roles & Permissions

The **Roles & Permissions** section controls what users can see and do inside the CRM.

Rather than assigning permissions individually to every user, permissions are grouped into roles. Users automatically inherit the permissions assigned to their role.

Role Profiles

The left sidebar displays all available role profiles.

Examples include:

- Admin
- Counselor
- Vendor
- Test
- Custom Roles

Selecting a role opens its permission configuration.

Administrators can also create additional custom roles to match their organization's structure.

Permission Configuration

Each role contains multiple permission groups organized by system modules.
Permissions are enabled or disabled using simple checkboxes.
This makes it easy to customize access without requiring technical knowledge.

Core System Navigation

Controls access to the CRM's primary navigation and dashboards.

Example permission:

- Access Main Analytics Dashboard

Users without this permission cannot access the Analytics module.

Lead Management Controls

Determines what actions users can perform within the Lead Management module.

Common permissions include:

- View Leads Database
- View Lead Details
- Edit Lead Profiles
- Bulk Reassign Leads
- Nurture Leads
- Delete Lead Entries

Administrators can restrict sensitive actions such as deleting leads while still allowing users to manage day-to-day operations.

Interactive Form Builder Actions

Controls access to the Form Builder module.

Examples include:

- Access Form Library
- Create Capture Schemes

- Edit Forms
- Publish Forms
- Delete Forms

This ensures only authorized users can create or modify lead capture forms.

Additional Permission Categories

Depending on the CRM configuration, permissions may also be available for:

- User Management
- Team Management
- Analytics
- Reports
- Audit Logs
- Settings
- Campaign Management
- Vendor Management
- Notifications
- Integrations

Each permission can be enabled independently, allowing highly flexible role configurations.

Permission Management Tools

Several tools are available to simplify permission management.

Clear All

Removes all selected permissions from the current role.

Useful when creating a highly restricted role from scratch.

Switch to Default

Restores the default permission set for the selected role.

This is helpful if changes need to be reverted.

Save Role Permissions

After modifying permissions, click **Save Role Permissions** to apply the changes.

Updated permissions take effect for all users assigned to that role.

Benefits of Role Management

Using roles and permissions provides several advantages:

- Protects sensitive business data
 - Prevents unauthorized access
 - Simplifies user administration
 - Standardizes permissions across teams
 - Reduces configuration errors
 - Supports organizational growth with scalable access control
 - Improves compliance and security
-

Typical Workflow

Creating a New User

1. Open the **User Accounts** tab.
2. Click **Add New User**.
3. Enter the user's details.
4. Assign a role and department.
5. Send the invitation.

6. The user receives access based on their assigned role.

Configuring Role Permissions

1. Open the **Roles & Permissions** tab.
2. Select the role you want to configure.
3. Review the available permission categories.
4. Enable or disable permissions as required.
5. Click **Save Role Permissions** to apply the changes.
6. All users assigned to that role automatically receive the updated permissions.

The **Role Management** module provides centralized control over user access and permissions, ensuring that every team member has the appropriate level of access for their responsibilities. By combining user account management with granular role-based permissions, it strengthens security, streamlines administration, and helps maintain a well-organized and compliant CRM environment.

Form Embed & Share Guide

The **Form Embed & Share** module allows you to publish your lead capture forms across websites, landing pages, emails, and social media. Once a form is published, you can either embed it directly into your website using an iFrame or share it through a unique URL.

Every submission made through an embedded or shared form is automatically captured and sent to your CRM in real time.

Form Embed Dashboard

The **Form Embed & Share** page displays all published forms that are available for embedding or sharing.

For each form, you can view:

- Form Name
- Publication Status
- Total Fields
- Number of Responses

This allows you to quickly select the form you want to distribute.

Search Forms

The search bar lets you quickly locate a form by its name.

This is especially useful when managing multiple forms across different campaigns or departments.

Published Status

Each form displays its current status.

Published

A **Published** form is live and ready to:

- Be embedded on websites
- Be shared via direct link
- Collect lead submissions

Only published forms can receive responses from users.

Embed Code

The **Embed Code** tab provides an iFrame code snippet that can be added directly to any website or landing page.

Simply copy the generated code and paste it into your website's HTML where you want the form to appear.

The embedded form automatically displays within your webpage while continuing to send submissions directly to the CRM.

This is ideal for:

- Company websites
- Landing pages
- Product pages
- Admission portals

- Contact pages
-

Copy Embed Code

Use the **Copy** button to instantly copy the generated embed code to your clipboard.

This eliminates the need to manually select and copy the code.

Appearance

The **Appearance** tab allows you to customize how the embedded form looks before publishing it on your website.

Depending on your configuration, you can adjust settings such as:

- Width
- Height
- Border radius
- Layout
- Responsive behavior
- Overall styling

These options help ensure the embedded form matches your website's design.

Live Preview

The **Live Preview** tab lets you view the embedded form exactly as visitors will see it.

This helps verify:

- Form layout
- Field arrangement
- Labels

- Styling
- Overall user experience

Previewing before publishing ensures the form is displayed correctly on your website.

Direct Share Link

In addition to embedding, every published form receives a unique shareable URL.

This direct link can be shared through:

- Email campaigns
- WhatsApp
- SMS
- Social media
- Online advertisements
- QR codes
- Customer support conversations

Recipients can open the link and submit the form without visiting your website.

Copy Link

Click the **Copy** button to quickly copy the direct share link for immediate distribution.

Open Link

The external link button opens the live form in a new browser tab, allowing you to test or preview the shared experience.

How Embedding Works

The information panel at the bottom of the page explains the embedding process and best practices.

iFrame Code Embed

Copy the generated iFrame code from the **Embed Code** section and paste it into your website's HTML or page builder.

If your website builder does not automatically resize embedded content, you can manually adjust the width and height values in the embed code.

Sharing Directly

Instead of embedding, you can distribute the form using its unique share link.

This is ideal for:

- Email campaigns
 - Marketing campaigns
 - Social media posts
 - SMS promotions
 - Printed materials using QR codes
-

Capturing Leads

Every submission made through either the embedded form or the direct share link is automatically:

- Validated
- Stored securely
- Added to the CRM
- Sent to the **All Leads** dashboard in real time

This ensures your sales or support team can begin working on new leads immediately without any manual data entry.

Benefits of Form Embedding

Using the Form Embed & Share module provides several advantages:

- Publish forms on any website or landing page
 - Share forms instantly using a secure direct URL
 - Collect leads in real time
 - Eliminate manual data entry
 - Maintain a consistent user experience across platforms
 - Increase lead generation through multiple distribution channels
 - Easily integrate forms into existing websites without additional development
-

Typical Workflow

1. Create and publish a form using the **Form Builder**.
2. Open the **Form Embed & Share** module.
3. Select the published form you want to distribute.
4. Choose one of the available distribution methods:
 - **Embed Code** for websites and landing pages.
 - **Direct Share Link** for email, social media, messaging apps, or marketing campaigns.
5. (Optional) Customize the form's appearance using the **Appearance** tab.
6. Use **Live Preview** to verify the form before publishing.
7. Copy the embed code or share link and distribute it.
8. Monitor incoming submissions in the **All Leads** dashboard, where every response is automatically captured and processed.

The **Form Embed & Share** module bridges the gap between your CRM and your audience, allowing you to publish forms anywhere, collect leads from multiple

channels, and ensure every submission flows directly into your lead management system for immediate follow-up.

Awareness

Show your ads to people who are most likely to remember them.

GOOD FOR:

Reach Brand awareness Video views

Campaign Management Guide

The **Campaign Management** module enables you to create, manage, publish, and monitor Meta (Facebook & Instagram) advertising campaigns directly from the CRM. Whether you prefer full manual control or AI-assisted campaign creation, the platform provides everything needed to launch and manage high-performing campaigns from one place.

Campaign Dashboard

The Campaign Dashboard provides a centralized view of your advertising activities and account performance.

From this page, you can:

- Create new campaigns

- Monitor campaign performance
 - View advertising metrics
 - Access campaign templates
 - Manage connected Meta accounts
 - Continue editing existing campaigns
-

Create a Campaign

The platform offers two ways to create a campaign.

Create Manually

The **Create Manually** option gives experienced marketers complete control over every campaign setting.

This option allows you to configure:

- Campaign Objective
- Budget
- Audience Targeting
- Placements
- Ad Sets
- Creatives
- Scheduling
- Optimization Settings

It is ideal for users who want full customization and advanced campaign management.

Create with AI

The **Create with AI** option uses an intelligent campaign assistant to guide you through campaign creation.

The AI asks a few simple questions, such as:

- Campaign Name
- Marketing Goal
- Target Audience
- Budget
- Creative Assets

Based on your responses, the AI automatically builds an optimized Meta advertising campaign.

This approach reduces setup time while helping users follow advertising best practices.

Campaign Performance Summary

The dashboard displays key advertising metrics to help you monitor campaign performance.

Ad Spend

Shows the total amount spent across active campaigns.

Impressions

Displays how many times your advertisements have been shown to users.

Clicks

Shows the total number of clicks received across your campaigns.

Lead Count

Displays the number of leads generated through your advertising campaigns.

These summary cards provide a quick overview of campaign effectiveness.

Connected Ad Networks

The **Connected Ad Networks** section displays all advertising platforms linked to the CRM.

Currently connected platforms may include:

- Meta Ads
 - Facebook
 - Instagram

This section displays:

- Connected Account
- Active Ad Account
- Active Facebook Page
- Connection Status

Administrators can manage advertising account permissions directly from this panel.

Recent Campaigns

The **Recent Campaigns** section displays recently created campaigns.

For each campaign, you can view:

- Campaign Name
- Campaign Objective
- Status
- Last Modified Date

You can also continue editing campaigns directly from this section.

Search and filter options make it easy to locate specific campaigns.

Campaign Templates

To simplify campaign creation, the platform includes pre-built templates for common advertising goals.

Examples include:

- E-commerce Sales
- App Install
- Lead Generation
- Brand Awareness
- Website Traffic

Templates automatically configure recommended settings, allowing campaigns to be launched more quickly.

Manual Campaign Builder

When creating a campaign manually, you begin by selecting your advertising configuration.

Buying Type

Choose how Meta should purchase advertising inventory.

Example:

- Auction

The selected buying type determines how your ads compete in the advertising marketplace.

Campaign Objective

Choose the primary goal of your campaign.

Available objectives include:

- Awareness

- Traffic
- Engagement
- Leads
- App Promotion
- Sales

Each objective is optimized for a different business outcome.

For example:

Awareness

Designed to maximize brand visibility and reach users who are most likely to remember your advertisements.

Best suited for:

- Brand Awareness
 - Reach
 - Video Views
-

Traffic

Optimized to drive visitors to your website, landing page, or mobile application.

Engagement

Encourages users to interact with your content through likes, comments, shares, or messages.

Leads

Designed to generate qualified customer inquiries through lead forms.

App Promotion

Encourages users to install or engage with your mobile application.

Sales

Optimized to drive purchases and maximize conversions.

AI Campaign Builder

The AI Campaign Builder offers a conversational experience for campaign creation.

An AI assistant guides you through the process by asking simple questions.

Typical information requested includes:

- Campaign Name
- Campaign Objective
- Budget
- Target Audience
- Ad Copy
- Creative Assets

The AI then automatically configures:

- Campaign Settings
- Ad Set Structure
- Targeting Recommendations
- Budget Allocation
- Optimization Preferences

This significantly reduces the complexity of campaign setup.

Campaign Workflow

Campaign creation follows a guided multi-step process.

Step 1 – Campaign

Define:

- Campaign Name
 - Objective
 - Buying Type
-

Step 2 – Ad Set

Configure:

- Audience
 - Location
 - Age
 - Interests
 - Placements
 - Budget
 - Schedule
-

Step 3 – Advertisement

Create the advertisement by adding:

- Images
 - Videos
 - Headlines
 - Primary Text
 - Description
 - Call-to-Action Button
-

Step 4 – Review

Review all campaign settings before publishing.

This step helps ensure that targeting, creatives, and budgets are configured correctly.

Ad Preview

A live preview panel displays how your advertisement will appear across different Meta placements.

Supported previews include:

- Facebook Feed
- Instagram Feed
- Stories
- Reels

This allows you to verify formatting, images, and messaging before publishing.

Upload Creative Assets

Campaigns support uploading marketing assets, including:

- Images
- Product Photos
- Promotional Graphics
- Videos (if supported)

Uploaded assets are used within the advertisement preview and final campaign.

Quick Goals

For faster campaign creation, the AI Builder includes quick goal shortcuts such as:

- Awareness
- Traffic
- Engagement

- Leads
- Sales

Selecting a goal automatically tailors the campaign setup toward that objective.

Save Draft

Click **Save Draft** to save your progress without publishing the campaign.

This allows you to return later and continue editing.

Publish Campaign

Once all campaign settings have been reviewed, click **Publish** to launch the campaign.

The CRM sends the campaign configuration to the connected Meta Ads account, where it begins delivery after Meta's review and approval process.

Benefits of Campaign Management

The Campaign Management module offers several advantages:

- Create Meta advertising campaigns without leaving the CRM.
 - Choose between manual configuration and AI-assisted setup.
 - Manage Facebook and Instagram campaigns from one interface.
 - Monitor campaign performance using real-time metrics.
 - Reuse pre-built campaign templates to save time.
 - Preview ads before publishing.
 - Manage connected advertising accounts securely.
 - Generate leads that automatically flow into the CRM for immediate follow-up.
-

Typical Workflow

1. Connect your Meta Ads account to the CRM.
2. Open the **Campaign Management** dashboard.
3. Choose **Create Manually** for full control or **Create with AI** for guided setup.
4. Select your campaign objective and buying type.
5. Configure the audience, budget, placements, and schedule.
6. Upload creative assets and write your ad copy.
7. Review the live ad preview across Facebook Feed, Instagram Feed, Stories, and Reels.
8. Save the campaign as a draft if further edits are needed, or click **Publish** to launch it.
9. Monitor campaign performance from the dashboard using metrics such as ad spend, impressions, clicks, and leads, and manage ongoing campaigns as needed.

The **Campaign Management** module combines powerful advertising tools with AI-driven assistance, enabling businesses to create, optimize, and manage Meta advertising campaigns efficiently while seamlessly integrating generated leads into the CRM for streamlined sales and follow-up.

Settings Guide

The **Settings** module is the central administration hub of the CRM. It allows administrators to configure system behavior, manage lead data, customize workflows, and personalize the platform's appearance.

From this module, you can:

- Create new operational sessions
- Import and export lead data
- Send bulk communications
- Configure CRM statuses
- Design lead journeys
- Customize the application's appearance

Each section is designed to simplify administration while ensuring the CRM remains flexible as your organization grows.

1. Session Creation

The **Session Creation** section is used to create and manage operational sessions, such as academic years, admission cycles, or business periods.

Creating a new session helps separate data between different operational timelines while preserving historical records.

Current Session

Displays the active session currently being used by the CRM.

Create a New Session

Choose whether to start a new operational session.

When enabled, a new session becomes the active workspace for future leads and activities.

Note: Creating a new session may archive or separate data from the current session, depending on your organization's configuration.

New Session Period

Specify the start and end dates for the new session.

This helps organize leads and reports by operational cycle.

Security Verification

To prevent unauthorized changes, session creation requires administrator verification.

The process includes:

- Entering a registered phone number
- Receiving a One-Time Password (OTP)
- Verifying the OTP
- Creating the new session

This additional verification protects critical system data.

2. Import Leads

The **Import Leads** section allows administrators to upload large numbers of leads using CSV files.

This is useful when migrating data from another CRM or importing leads collected from external sources.

Assign Leads To

Choose which counselor, team, or user should receive the imported leads.

Lead Source

Specify the source assigned to all imported records.

Examples include:

- Website Organic
- Campaign
- Referral

- Offline Event
 - Manual Import
-

Upload CSV File

Upload a CSV file containing lead information.

Required columns typically include:

- Name
 - Email
 - Phone Number
-

CSV Preview

Before importing, the system displays a preview of the uploaded data to ensure the file structure is correct and that records are mapped accurately.

Sample CSV Template

Download the sample template to understand the required format before preparing your import file.

Import Leads

Once the file has been validated, click **Import Leads** to add the records to the CRM.

3. Export Leads

The **Export Leads** section allows administrators to download CRM data for reporting, backups, or analysis.

Export Format

Choose the preferred export format, such as:

- CSV (.csv)
-

Export Filters

Narrow down the exported data using filters such as:

- Assignee
- Lead Source
- Lead Status

This ensures only relevant records are included in the export.

Live Preview

Before exporting, the system displays a preview of the matching records, allowing administrators to verify the results.

Export Leads

Click **Export Leads** to generate and download the filtered dataset.

4. Bulk Messaging

The **Bulk Messaging** section enables organizations to send personalized messages to multiple leads simultaneously.

This is ideal for promotional campaigns, announcements, reminders, or follow-up communications.

Campaign Details

Configure the message campaign by entering:

- Campaign Title
- Email Subject

- Message Content

Message templates can include placeholders (such as a recipient's name) for personalized communication.

Delivery Channel

Choose how messages will be delivered:

- Email & SMS
 - Email Only
 - SMS Only
-

Target Audience

Select recipients using one of two methods:

Lead Database Range

Automatically target leads based on CRM filters.

Manual Input List

Provide a custom list of recipients.

Audience Filters

Filter recipients using criteria such as:

- Lead Score
- Assigned Counselor
- Other available CRM filters

The system displays a preview of the matching recipients before messages are sent.

5. Custom Statuses

The **Custom Statuses** section allows administrators to create and manage lead statuses used throughout the CRM pipeline.

Custom statuses help organizations adapt the CRM to their own sales or admission processes.

Create Status

When creating a new status, configure:

- Status Key (Unique Identifier)
- Display Label
- Badge Color
- Description

Each status represents a stage in your lead lifecycle.

Examples include:

- Contacted
 - Callback
 - Converted
 - Qualified
 - Follow-up Scheduled
-

Active CRM Statuses

The table displays all existing statuses along with:

- Badge Preview
- Status Key
- Description

Administrators can edit or delete statuses as needed.

6. Lead Journey

The **Lead Journey** section defines the sequence of stages that a lead follows from initial contact to final conversion.

This helps standardize workflows across the organization.

Sales Pipelines

Create and manage multiple sales or admission pipelines.

Each pipeline represents a unique customer journey.

Examples:

- Standard CRM Pipeline
 - MBA Admissions
 - Enterprise Sales
 - Customer Support
-

Default Pipeline

Designate one pipeline as the default for newly created leads.

Status Picker

Select which statuses belong to the chosen pipeline.

Only selected statuses become part of the lead journey.

Step Progression Order

Arrange statuses in the order they should appear.

For example:

1. Contacted
2. Callback
3. Qualified

4. Proposal Sent

5. Converted

Administrators can reorder stages using the available controls.

Pipeline Management

Additional tools allow administrators to:

- Create new pipelines
 - Reset to default configuration
 - Clear all stages
 - Modify existing journeys
-

7. Appearance

The **Appearance** section allows administrators to personalize the CRM's visual design.

This helps align the interface with organizational branding and user preferences.

Accent Theme

Choose the application's primary color.

Available themes include:

- Classic Blue
 - Royal Purple
 - Teal Green
 - Sunset Orange
 - Crimson Red
 - Sleek Dark
-

Typography Size

Adjust the base font size to improve readability.

Available options include:

- Small
 - Default
 - Medium
 - Large
-

Visual Palette

Select the application's color mode.

Available options include:

- Light Mode
- Dark Mode

These settings allow users to work comfortably in different lighting environments while maintaining a consistent visual experience.

Benefits of the Settings Module

The Settings module enables organizations to:

- Configure operational sessions
- Import and export lead data efficiently
- Communicate with leads at scale
- Customize CRM workflows
- Standardize sales and admission pipelines
- Personalize the application's appearance
- Improve security through administrator verification
- Adapt the CRM to changing business requirements

Typical Workflow

1. Open the **Settings** module.
2. Create or update operational sessions when starting a new business cycle.
3. Import leads from external sources using a CSV file.
4. Export filtered lead data for reporting or backup purposes.
5. Send bulk email or SMS campaigns to targeted audiences.
6. Create or update custom lead statuses to match your business workflow.
7. Configure lead journeys by organizing statuses into one or more pipelines.
8. Customize the CRM's appearance by selecting a theme, typography size, and display mode.

The **Settings** module serves as the administrative control center of the CRM, providing the flexibility to manage system configuration, organize lead workflows, maintain data, communicate with customers, and personalize the user experience—all from a single, centralized location.
